

STEP-BY-STEP PROCESS FOR LOADING LIQUID AGRONOMY PRODUCTS

1. Connect with any Pro Cooperative agronomist to form a personalized plan
2. Get a work order from your agronomist and driver number from the agronomy center manager

3. Drive up to Pro Cooperative's 24 hour bay

4. Enter the driver identification number into the kiosk and drive into the bay

5. At the interior kiosk, enter driver identification number followed by work order number

6. Hook up the female hose to the trailer's male camlock connectors

7. Participate in a walk through tutorial from Pro's Agronomy Center Manager

8. Verify screen's information, confirm hookup's attachment, wait until the green light turns on and push green button to start filling the trailer

9. After the trailer tank is done filling, return the hose to the hook on the wall, and exit the bay cautiously

Any questions, connect with the Agronomy Center Manager

GROWING TOGETHER  HARVESTING SUCCESS

IMPORTANT REMINDERS:

-Both Pro Cooperative Agronomy Centers feature a female 3 inch camlock for hose connection. Drivers must have a 3-inch male camlock fitting on their trailers to successfully load product.

-When loading, the yellow light = pause and the green light = good to proceed filling

-A 3000-gallon trailer will not hold 3000 gallons of product. This is true for all sizes of bulk containers. Tanks are designed differently and must accommodate factors such as expansion, sediment, and residue.

-The hose connection is located on the passenger side (right rear side) of the vehicle or trailer.
